Panorama of the Pre-School Building and Infant School Play-areas

The installation of the modular building in 2007 has fitted in well with the surrounding features in a disused corner of the school site. It has enabled an important part of school curriculum to be attained and external play areas used to the full. The low picket fencing has given demarcation between the varying aged children. Access for parents has been given directly from the car park via security gates and the varying hours of occupation does not interfere with the infant school.
