A4500 Wellingborough Road, Northampton
Proposed Improvements
Phase 1
October 2019 to January 2020

Wellingborough Road west
Widening of the current highway into Northampton to improve capacity and lane usage. Footpaths and parking arrangements will remain unchanged. The existing, narrow cycle lane will be removed and cyclists will be accommodated within a second full width carriageway.

Wellingborough Road east
Revised alignment of the road going out of town to complement the new arrangement at St Edmund’s Street junction and improve traffic flow.

St Edmund’s Street northbound
We will widen the northbound carriageway to improve traffic flow and reduce queues at the junction by providing a dedicated left hand turn lane onto Wellingborough Road west, which will require a small reduction in the verge width (maximum 50cm) on the eastern side.
